

# Day 1

\* Replit

Printing, commenting, Debugging, String manipulation and Variables

↳ Function `print()` → outputs a string  
↳ `"` String of characters  
↳ `"` End

↳ String manipulation and code intelligence

DEBUG  
↳ bug in the computer

- `'\n'` → new line

- `+` → concatenates : `print('Hello' + ' Angela')`

↳ The python `INPUT()` function  
↳ get user input

↳ Python variables and Variable Naming  
↳ Make code with meaningful names

↳ Test 2

- Variables are case sensitive
